

## HENRY RILEY ENVIRONMENTAL POLICY

We recognise that our office based operations can impact the environment however we also have a responsibility to help guide and influence through our role as construction professionals to achieve better environmental performance on projects.

We aim to do this by:

- Developing, documenting and maintaining measures and setting targets for our overall environmental performance.
- Identifying our significant environmental impacts that are appropriate to the nature, scale and environmental impacts of our activities, products and services. These include recycling, document printing, energy use and document storage.
- We commit to a process of continual improvement and prevention of pollution caused by the business.
- Our EMS Manager, along with a support team, regularly reviews the policy to ensure we identify and understand the needs of our clients and the business itself for continued improvement.
- We provide appropriate training for our employees.
- Put in place procedures and support information that enables compliance with laws, regulations and codes of practice including those relating to environmental issues.
- Ensure legal compliance, compliance with industry best practice and other requirements identified by regulatory bodies and client organisations.
- Report annually savings and reductions in energy and resource use/waste via systems such as the intranet.
- The ongoing development of our Environmental Management System to incorporate the above and adhere to ISO 14001 certification. Details can be found on the Environmental section of the intranet and further information can be issued on request.

Signed:

**Jim Hendley, Managing Partner**
